

Software Engineer – Data & Reporting Platforms

Role Overview

Software Engineer focused on Data & Reporting Platforms to support the migration of existing Power BI reports into a custom-built analytics and reporting environment. This role goes beyond traditional BI development. The ideal candidate will bridge data engineering, backend logic, and frontend visualization, transforming legacy reports into scalable, high-performance web-based applications.

Following the migration effort, this individual will continue to enhance and expand the platform through new reporting capabilities and broader application development.

We are hiring across multiple experience levels and will align responsibilities and expectations accordingly.

Key Responsibilities

Reporting Platform Migration

- Analyze and deconstruct existing Power BI dashboards, data models, and DAX logic
- Translate reporting logic into SQL (PostgreSQL), backend services, and application code
- Rebuild reports using modern web technologies (HTML, CSS, JavaScript)
- Ensure accuracy, usability, and functional parity with legacy reports

Data Engineering & Backend Development

- Design, develop, and optimize SQL queries, views, and stored procedures
- Build data access layers via APIs (REST and/or GraphQL)
- Integrate with multiple data sources (PostgreSQL, SQL Server, MySQL, etc.)
- Ensure performance and scalability when working with large datasets

Frontend & Visualization Development

- Develop responsive, interactive dashboards and reporting interfaces
- Implement filtering, drill-downs, and dynamic data exploration features
- Utilize modern JavaScript and visualization libraries (e.g., D3.js, Chart.js, ECharts)
- Ensure cross-browser compatibility and accessibility

Platform & Application Development

- Contribute to the evolution of Qualo's reporting platform into a broader application ecosystem
- Collaborate on architecture, system design, and extensibility
- Participate in building reusable components and frameworks for future development

Quality, Security, and Collaboration

- Follow secure coding practices and implement role-based access control where required
- Write clean, maintainable, and well-documented code
- Participate in code reviews, testing, and continuous improvement processes
- Collaborate with product, data, and client-facing teams to translate business needs into technical solutions

Required Qualifications

- Experience in software development (not limited to BI tools)
- Strong SQL skills, preferably with PostgreSQL
- Proficiency in HTML, CSS, and JavaScript

- Experience working with data-driven applications or reporting systems
- Ability to translate business requirements into technical solutions

Preferred Qualifications

- Experience migrating or replacing BI platforms (e.g., Power BI, Tableau)
- Familiarity with data modeling concepts (facts, dimensions, star schemas)
- Experience with modern frontend frameworks (React, Vue, Angular)
- Exposure to backend development (Node.js, Python, Java, or similar)
- Experience designing APIs and integrating distributed systems
- Understanding of performance optimization for analytical workloads
- Familiarity with cloud platforms (Azure preferred) and CI/CD pipelines

What We're Looking For

We are intentionally seeking engineers—not just report builders. Strong candidates will demonstrate:

- A full-stack mindset (data → backend → frontend)
- Comfort working across systems, not just within a single tool
- Ability to modernize legacy solutions into scalable platforms
- Curiosity and ownership in solving complex data and application challenges

Candidates may come from backgrounds such as:

- Full-stack or backend engineering with data experience
- BI developers who evolved into software engineers
- Data engineers with frontend/reporting capabilities
- Enterprise or solution architects with hands-on development skills

Growth & Opportunity

This role offers the opportunity to:

- Help define and build a next-generation analytics platform
- Work on real-world, high-impact data problems in health and human services
- Expand into broader application and platform engineering over time
